

ADEPIDYN™ – For control of early blight in potatoes

Best-in-class, noticeably superior control.

ADEPIDYN™ has been found to be safe and effective on potatoes whether used solo or in tank-mixes.

Used in potatoes, ADEPIDYN™ brings a range of benefits, including:

- Consistent, long-lasting disease control, improving yield.
- Powerful control of early blight, prolonging the green leaf area and maximizing yield potential. Early blight, is one of the most common diseases attacking leaves and stems of potatoes.
- Rainfastness within one hour of application.

ADEPIDYN™ is designed to replace less effective compounds which have reduced effectiveness because of adaptation, or less sustainable compounds that are being removed from the market due to regulatory reasons.
